SUMMARY

Full-stack software engineer with 3+ years of experience building backend services, cloud infrastructure and web/mobile applications for agricultural machine telemetry at Stara, a Brazilian agtech manufacturer. Owns the company's partner Integrations API, used by John Deere, Jacto and Case, and built a telemetry integration with Volvo alongside engineering teams in Sweden, the United States and India. Strong in TypeScript, Node.js/NestJS, Flutter and AWS, with a solid foundation in algorithms and data structures.

EXPERIENCE

Stara S/A — Rio Grande do Sul, Brazil

Software Developer

Mar 2025 – Present

Stara Integrations API

- Designed, built and maintain the Integrations API (NestJS, TypeScript, Drizzle ORM, MySQL) that delivers agricultural machine telemetry to partners including John Deere, Jacto and Case.
- Owned the project end to end: architecture, OAuth2 authentication with AWS Cognito, Terraform-managed infrastructure (ECS, SQS/DLQ, EventBridge), deployment and monitoring.
- Implemented Redis caching, standardized REST response envelopes with request tracing, and GeoJSON (RFC 7946) output for machine paths, alarms and field boundaries, documented with OpenAPI/Swagger.

Volvo Integration

- Built a microservice that sends engine data from Stara machines to Volvo's API, processing CAN bus/ISOBUS signals and storing data in AWS S3.
- Took part in weekly English-language meetings with engineering teams in Sweden, the United States and India to align technical and business requirements.

Telemetry Web 3.0

- Developed features for the company's web telemetry platform using Flutter Web, Node.js and AWS services.
- Refactored core modules of the telemetry application to improve performance and maintainability.

Software Development Intern

Aug 2023 – Mar 2025

- Designed and developed the Machines API, used to transmit telemetry data from Stara machines.
- Built mobile applications in Flutter and REST APIs in Node.js.
- Worked daily with AWS serverless services: API Gateway, Lambda, SQS, Cognito, S3, RDS and ElastiCache.
- Promoted to a full-time Software Developer role at the end of the internship.

EDUCATION

B.Sc. in Computer Science — Universidade de Passo Fundo (UPF), Brazil

Feb 2023 – Dec 2026 (expected)

ACADEMIC EXPERIENCE

Teaching Assistant, Data Structures II — UPF

Feb 2026 – Jun 2026

- Tutored undergraduate students on binary trees, graphs and hash tables, supporting lab exercises and theory reviews.

Competitive Programming

- Competed in the SBC Programming Marathon (ICPC qualifier) in 2025 and 2026, regional stage.
- Active on Codeforces and Beecrowd; algorithm and data structure implementations published on GitHub.
- Completed UPF workshops on competitive programming, software testing (unit and integration tests), Docker and Spring Boot, among other technologies.

SKILLS

Languages: TypeScript, JavaScript, Dart, Python, Go, C/C++

Backend: Node.js, NestJS, Express, REST APIs, microservices, OAuth2, Drizzle ORM, MySQL, Redis

Frontend & Mobile: Flutter, Flutter Web, React

Cloud & DevOps: AWS (API Gateway, Lambda, ECS, SQS, EventBridge, Cognito, S3, RDS, ElastiCache, Secrets Manager), Terraform, Docker, Git, Linux

Practices: Unit and integration testing, software architecture, data structures and algorithms

Spoken languages: Portuguese (native), English (advanced)
